

Herbivore, Carnivore or Omnivore?

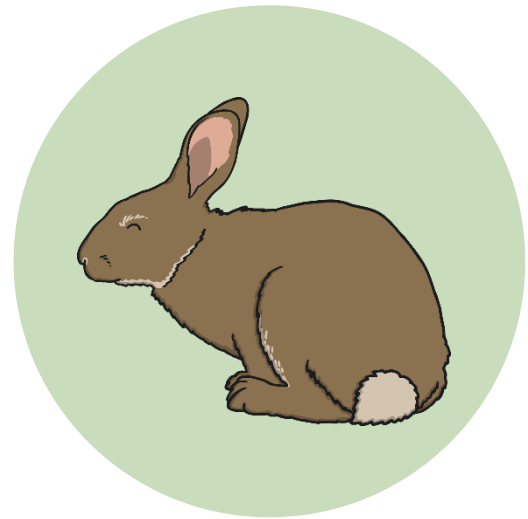

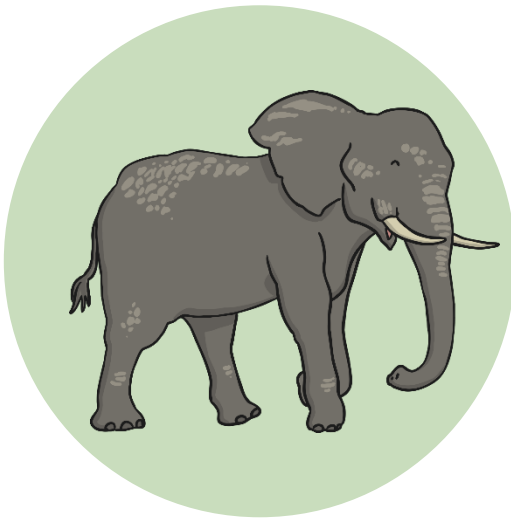

Grouping animals.

- Animals eat lots of different things. Animals are organised into 3 different groups, depending on what they eat.

Herbivores

Herbivores are animals that only eat plants.
They can have wide flat teeth for grazing on grass or beaks to open nuts.

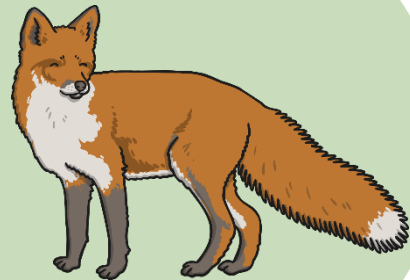

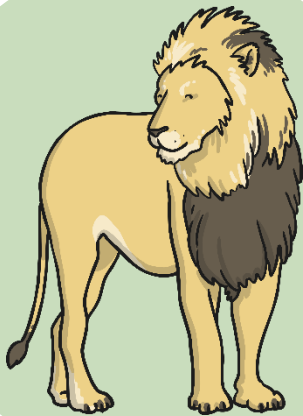

Carnivores

Carnivores are animals that only eat meat.

They get this meat from other animals.

They can have sharp teeth for chewing the meat or claws or beaks for ripping it.

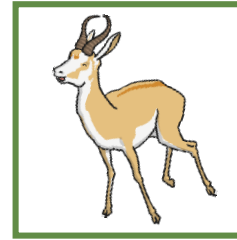

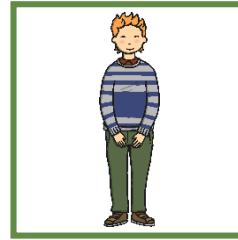

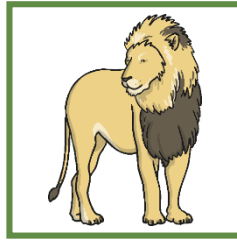

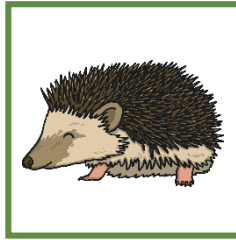

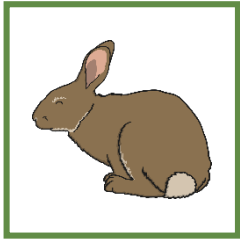

Omnivores

Omnivores are animals that eat both plants and meat.
